Consent to Obtain Patient Medication History

Patient medication history is a list of prescription medicines that our practice providers, or other providers, have prescribed for you. A variety of sources, including pharmacies and health insurers, contribute to the collection of this history.

The collected information is stored in the practice electronic medical record system (EHR/EMR) and becomes part of your personal medical record. Medication history is very important in helping healthcare providers treat your symptoms and/or illness properly and in avoiding potentially dangerous drug interactions.

It is very important that you and your provider discuss all your medications in order to insure that your recorded medication history is 100% accurate. Some pharmacies do not make drug history information available, and your drug history might not include drugs purchased without using your health insurance. Also over-the-counter drugs, supplements, or herbal remedies that patients take on their own may not be included.

I give my permission to allow my healthcare provider to obtain my medication history from my pharmacy, my health plans, and my other healthcare providers.

Patient/Parent/Guardian Signature
